# KEYING AND SECURITY MADE EASY

## Digital Masterkeying

Logic electromechanical cylinders offer convenience and security through digital masterkeying. Using technology that combines digital encoding and physical components, Logic electromechanical cylinders function like standard mechanical cylinders with the added advantage that all rekeying is done electronically.

## Instant Rekeying

Keys can be instantly and easily deactivated or reprogrammed with different access permissions or schedules.

## Program Schedules Into Cylinders or Keys

Logic electromechanical cylinders allow system managers to program either cylinders or keys. System changes can easily be made real-time or by preprogrammed schedules.

## Audit Trail

Logic electromechanical cylinders provide comprehensive audit trail reports showing authorized access, attempted access, and access and expiration schedules. The audit trail can be obtained from either the key or the cylinder.

## Proven Key Control

With factory controlled key cutting and highly encrypted digital codes, Logic electromechanical cylinders offer superior protection against unauthorized key copying and electronic attacks.

## Aesthetics

Unlike many standalone systems, Logic electromechanical cylinders discretely blend into existing hardware and architectural designs. In addition, Logic electromechanical cylinders are available in most common architectural finishes.

## Easy Installation

Logic electromechanical cylinders simply retrofit existing mechanical cylinders and leverage the use of existing hardware without any door/frame modifications. No electricity, hardwiring, phone, or Internet connection is necessary.

## Learn More

Logic electromechanical cylinders are available through authorized Medeco locksmith dealers. To find a dealer in your area, please call 1.800.839.3157 or visit [www.medeco.com](http://www.medeco.com).
